Cyber Security : System Adminstration and Hardware Basics

Task 2 and 3

Task 4

1. **Root structure:** Linux has a single tree starting at /, and drives are mounted inside it (e.g. /mnt, /media). Windows uses separate drive letters like C:\ and D:\.

2. **User files:** Linux keeps personal files in /home/username. Windows keeps them in C:\Users\username.

3. **System configuration:** Linux stores configuration as plain-text files in /etc (e.g. /etc/passwd, /etc/ssh/sshd_config). Windows stores it mostly in the Registry and in C:\Windows\System32.

Task 5
