Cyber Security : Hardware and Storage

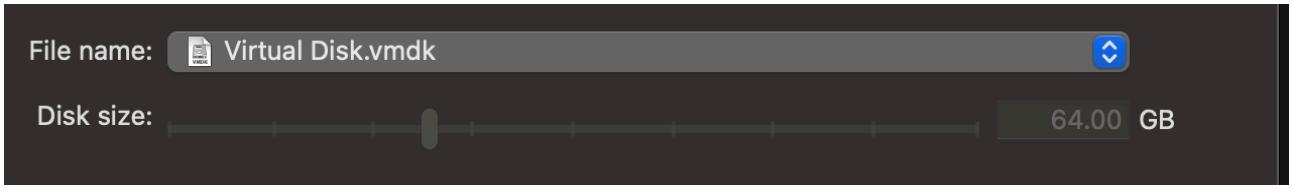

Day 1

Task 1

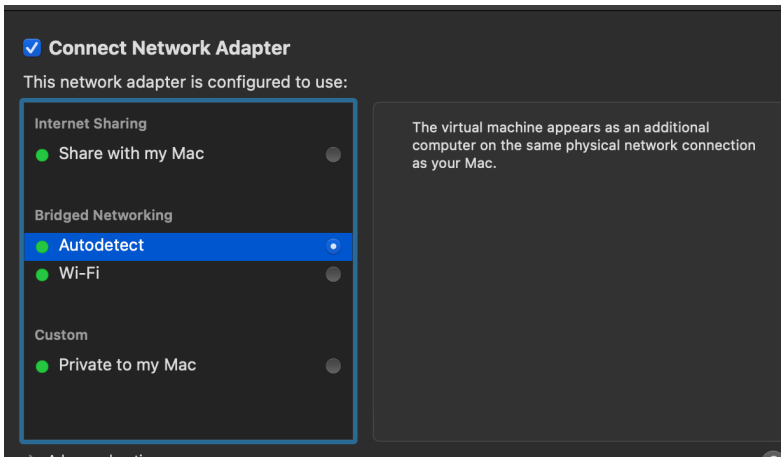

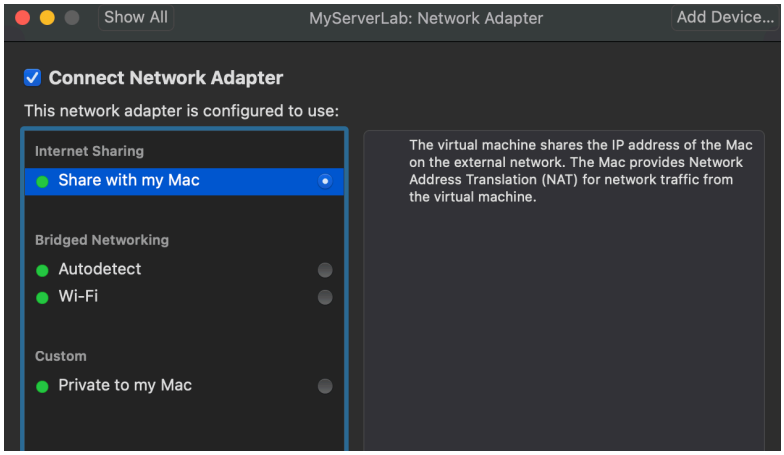

Task 2

Task 3

Task 4

Total Physical Memory	3.99 GB
Available Physical Memory	1.38 GB
Total Virtual Memory	5.43 GB
Available Virtual Memory	3.12 GB

Processor	Apple silicon, 2000 Mhz, 2 Core(s), 2 Logical Processor(s)

Task 5

RAM is the server's fast working space. Running services, the OS kernel, and the file cache all live in it. When there is enough RAM, the system can keep frequently used data in memory and respond quickly. When RAM is reduced, the OS starts swapping memory pages to disk, which is orders of magnitude slower than RAM, causing higher latency, slower boot, and reduced ability to handle concurrent users
